JANUARY

Esthetics & Function: Contemporary Protocols for Success

Presented by:
Dr. Leonard Hess
Clinical Director

Lecture

The marriage of function and esthetics can be a difficult one sometimes. Incisal edge position, joint health, envelope of function, anterior guidance, airway issues and more are all in play. Our reputation is based on our anterior restorations so it is important to have a system which leads to predictability and profitability. Patients expect esthetic, phonetic, and functional success. This course will show you the foundation of all these principles as well as ensure the marriage of function and esthetics is one that lasts!

This course will teach you how to:

- ▶ Understand the 5 requirements of occlusal stability and how proper form follows function
- ▶ Discover how to determine, verify, and control quality in anterior esthetics
- ▶ Feel more comfortable when you suspect patients have an airway versus parafunctional issues

Date:
January 28, 2022
via Zoom 9am-1pm EST

FEBRUARY

The Hygienist's Role in Diagnosing Occlusal Problems

Presented by:
Dr. Nicholas Rallis
Associate Faculty

Lecture

Oftentimes the hygienist is the first producer in the dental office to meet and treat patients; they gather most of the diagnostic information before the dentist is introduced. Patients trust their hygienists and oftentimes ask for their "advice" on proposed treatment. It is therefore prudent that every hygienist recognize the signs and symptoms of the most undiagnosed problem in a patient's mouth - OCCLUSAL DISEASE. It is also important that every hygienist know and understand the terminology to be able to explain these issues to a patient in preparation for the doctor's examination.

This course will teach you how to:

- ▶ Identify signs and symptoms of occlusal disease & instability
- ▶ Understand Basic TMJ anatomy; why we use splints
- ▶ Use photography / IO scans to communicate with patients
- ▶ Understand how and why do we record CR; why is it important?

Date:
March 4, 2022
via Zoom 9am-1pm EST

MARCH

Invisalign® Essentials for Complete Care

Presented by:
Dr. Andrew Reingold
Associate Faculty

Lecture

Introducing a predictable, methodical approach to Repositioning teeth utilizing the same principles we already have for Reshaping and Restoring. This live online-event truly outlines all the sequential steps to implement Invisalign in the Complete Dentistry office. Attendees will raise their understanding of GP orthodontics to tackle more cases, obtain better results, and achieve increases of case acceptance and predictability. Let this one-day experience raise your confidence that moving teeth will move your practice more than you can imagine!

This course will teach you how to:

- ▶ How to add Invisalign to a Complete Dental Practice
- ▶ Understand case selection to simplify your progress
- ▶ Discuss the records process for optimal Invisalign workflow
- ▶ Become familiar with the biomechanics of aligner orthodontics to determine what will work best for you
- ▶ Incorporate Clin Check Pro tools and workflow to get what you want executed correctly

Date:
March 18, 2022
via Zoom 9am-1pm EDT

APRIL

Restoring Implants Predictably: Optimal Tissue, Crown Design & Occlusion

Presented by:
Dr. Jeff Scott
Senior Faculty

Lecture

What has been missing for many doctors are the details of how to go from the concept of "prosthodontically driven treatment plan" to delivering comfort, function, health, and optimal esthetics for their patient. This course will cover the key steps in achieving predictable results with the most common scenarios general dentists face, 1's, 2's, and 3's- single crowns, side by side implant crowns, and 3-unit bridges. Whether you place implants or not, the restorative dentist is responsible for the long-term health and stability of the final result, including tissue management, crown design and occlusion.

This course will teach you how to:

- ▶ Understand how to communicate with the dental laboratory and surgeon to pre-plan the success of the case.
- ▶ Know what options are available to help develop an appropriate emergence profile
- ▶ Understand the scanning and impression process
- ▶ How to determine and deliver the correct torque to various component screws.
- ▶ Understand the impact crown design has on tissue health, retrievability, and occlusal force.

Date:
April 22, 2022
via Zoom 9am-1pm EDT

MAY

✓ The Inflammation - Airway - TMD Connection: From Building a Business Model & Systems to Implementation

Presented by:
Dr. DeWitt Wilkerson
Senior Faculty
Resident Expert, Integrated Dental Medicine

Lecture

As our understanding of how the masticatory system relates to the whole body, the connections are coming together- along with our enhanced capability- along with our enhanced capability to correctly diagnose and treat more complex problems. Many of the common "TMD" issues we see in our practices have a breathing and sleep disorder connection. Systemic inflammation is the #1 cause of pain and poor health, and is important for masticatory system health. This course will explore the links between inflammation, airway and TMD, as well as help you to develop systems for evaluation, treatment and building a business model for expanded services in your Dawson style practice.

This course will teach you how to:

- ▶ Utilize a checklist for evaluating inflammation, airway and TMD
- ▶ Learn to link these concerns together
- ▶ Develop strategies for implementation in clinical practice
- ▶ Develop verbal skills and co-discovery methods with patients

Date:
May 20, 2022
via Zoom 9am-1pm EDT

JUNE

✓ How to Properly Sequence Treatment Plans for Complex Cases

Presented by:
Dr. Neeraj Khanna
Senior Faculty

Lecture

When the masticatory system is understood completely, a diagnosis and treatment plan can be created to provide optimal health. This can include a combination of reshaping, repositioning and restoring of teeth to fulfill the five requirements of a stable occlusion. Most patients have signs of dental instability which can result in complex treatment plans requiring coordination with other dental specialists & laboratory technicians. The sequencing of this collaboration becomes paramount to the success of the treatment outcome regardless of the difficulty of the treatment. The restorative dentist is the coordinator who orchestrates the sequencing of the treatment plan for the team. We will work through various cases of difficulty and illustrate how sequencing the treatment allows you to think through a process that creates clarity and understanding.

This course will teach you how to:

- ▶ Review the 2D & 3D Checklists and how they relate to proper sequencing.
- ▶ Understand the difference between a simple and complex treatment plan
- ▶ Learn to categorize various treatment plans
- ▶ Understand sequencing involving dental specialists, and laboratory technicians.
- ▶ Communicate sequencing to patients; create checklists for your procedure(s);
- ▶ Sequence complex cases in a systematic manner

Date:
June 3, 2022
via Zoom 9am-1pm EDT

JULY

✓ Oral Surgery for the General Practitioner

Presented by:
Dr. Pio Modi
Associate Faculty

Lecture

Oral surgery procedures present routinely in a dental practice. Examples include basic extractions up to complex wisdom tooth extractions, socket preservation and crown lengthening. They can be intimidating to do and thus are often referred out. The goal of this course is for you to discover how to keep those procedures and treatments in your practice and to demystify the complexity associated with surgeries so that you will have the confidence to tackle these procedures the next day at your office. Live videos along with detailed step by step for each of the procedures discussed will be.

This course will teach you how to:

- ▶ Extractions - Examine and learn how to perform different types of extractions, from simple to impacted wisdom teeth
- ▶ Socket Preservation - Understanding how to perform a single tooth socket preservation
- ▶ Crown Lengthening - Looking at and understanding crown lengthening procedures, from the posterior to the more complex esthetic zone
- ▶ Suturing - A discussion of suturing principles along with looking at different types of suturing techniques and when they are applicable
- ▶ Post-Operative Management - Understanding how to manage patients post-operatively to help with pain, swelling and overall success

AUGUST

✓ Partial Denture Principles and Design

Presented by:
Dr. Kimberley Daxon
Senior Faculty
Resident Expert, Removable Prosthodontics

Lecture

This course will review the 3 pillars of partial denture design: support, stability and retention and how these principles relate to conventional partial denture fabrication. Various precision attachments will be reviewed along with a step by step process for fabricating a precision RPD with crown and bridgework.

This course will teach you how to:

- ▶ Understand support, stability and retention
- ▶ Identify the different Kennedy classifications for RPD design
- ▶ Review tooth preparation techniques for an RPD
- ▶ Determine which attachment systems are best
- ▶ Know how to make a precision RPD to fit with crown and bridgework

Date:
August 26, 2022
via Zoom 9am-1pm EDT

SEPTEMBER

✓ V.D. Ohhhh: Cracking the Vertical dimension!

Presented by:
Dr. Leonard Hess
Clinical Director

Lecture

When faced with a case that would benefit from gaining room by increasing the vertical dimension, what is the best approach for long term stability? Function and esthetics can be tremendously improved but how does it affect the TMJ's and the muscles? This lecture will present a simplified and predictable approach to help plan and complete cases when opening the VDO. A number of cases will be shown as examples from start to finish.

This course will teach you how to:

- ▶ Understand why it is importance to use Centric Relation when changing the VDO
- ▶ See how to utilize the 4 treatment options when opening the VDO
- ▶ Learn the best way to establish a new VDO when treating severe wear cases
- ▶ When not to open the VDO

Date:
September 9, 2022
via Zoom 9am-1pm EDT

Step-by-Step Guide to Immediate Conversions and All-on-4

Presented by:
Dr. Brian Sang
Associate Faculty

Lecture

One of the more attractive, lucrative, and advanced procedures to date in general dentistry is the concept of Immediate Conversions. Proper patient selection and planning are among a few of the important criteria for successfully fabricating a fixed-hybrid prosthesis. During this dental CE live stream course, we will lay out a systematic approach to help guide the general dentist from start to finish following The Dawson Academy's principles of occlusion.

This course will teach you how to:

- ▶ Review the ideal Complete examination, records, and treatment planning processes using the Smile Wizard
- ▶ Determine the proper patient selection protocols from a surgical and prosthodontic view
- ▶ Understand how to quarterback the interdisciplinary team using implant planning software, 3D design, and surgical guide fabrication
- ▶ Summarize basic surgical techniques for success

Date:
September 16, 2022
via Zoom 9am-1pm EDT

NOVEMBER

Treatment Sequencing, Phasing & Fair Fees

Presented by:
Dr. Raj Upadya
Senior Faculty

Lecture

Complete care dentistry means determining how to deliver quality results to your patients. In addition to a variety of systemic issues that can impact a treatment plan, often financial constraints and patient schedules can alter an ideal treatment plan. The solution is developing proper sequencing, and phasing treatment in order to meet the ideal goal(s) of your patient. This course is designed to help you recognize how to make your treatment plans succeed over an extended timeframe while giving your patients the quality care they deserve. Dr. Upadya will also discuss how to determine fair fees to ensure your treatment plans are a win/win.

This course will teach you how to:

- ▶ Using the vast amount of information that is ascertained during a Complete Examination, gain the ability to determine what concerns are immediate, deferrable or elective
- ▶ Learn to envision the end result of an ideal treatment plan and break it up into its constituent stages appropriately
- ▶ Determine safe stopping points during extensive treatment plans
- ▶ Learn to use the benefits of modern dental materials to our advantage while avoiding their normal pitfalls and frustrations
- ▶ Increase patient satisfaction and financial production, reduce workload while still being mindful of dental benefit plans

Date:
November 11, 2022
via Zoom 9am-1pm EDT

Mastering Resin Restorations

Presented by:
Dr. Pio Modi
Associate Faculty

Lecture

Dentistry has advanced tremendously in all fields with dentists being able to provide a wide array of clinical procedures. This advancement has been further accelerated by digital technology. However, at the core of dental procedures provided are your classic resin restorations, a treatment modality that is often overlooked and taken for granted. One often assumes that dentists have general proficiency with restorative treatment and yet there can be a high degree of variability in the final outcomes and success rates of restorations. This course will be an exciting journey at ways to create exquisite resin restorations, with practical step by step approaches taught throughout. Clinical cases will be shown with detail including live videos.

This course will teach you how to:

- ▶ Techniques to use with building the restoration
- ▶ Establishing Ideal contacts especially in difficult situations
- ▶ How to properly sequence and restore multiple adjacent teeth
- ▶ When and how flowable resin can be used to create an excellent marginal seal
- ▶ Determining final considerations with adjustment of the occlusion and specific anatomical features to assure success
- ▶ Analyzing considerations with layering anterior resin restorations (e.g. class 4 restoration) vs. posterior restorations
- ▶ Lingual Shelf - Establishing the foundation for layering the restoration with a well-designed putty matrix
- ▶ Building and contouring the anatomy (primary and secondary) needed to create natural looking restorations
- ▶ Reviewing proper polishing techniques that will help to create the final desired lustre luster for the restoration

Become a Season Pass holder and save hundreds.

View all the year's live stream courses for 365 days from point of purchase and save hundreds on tuition as opposed to registering for each live stream on its own.

Benefits

- ▶ 12 Courses – Attend live or later
- ▶ 48 Hours CE – Various topics
- ▶ 365 Days Access – Online learning portal

Frequently Asked Questions

What if I missed a previous live stream or can't make a future one?

Enjoy access to all courses on your Online Learning Portal starting a few business days after the course wraps up. You will be notified via email.

What does '365 Days Access' mean?

From the date of purchase, you will have 365 days to attend and receive CE for these courses—regardless of your attendance method.

Ex: If you purchase on July 25, 2022, you will have access to all previous courses immediately, and all future courses during and after they are held, until July 25, 2023.

Can I attend future courses live?

Yes! You will receive Zoom invites via email a few days before each future live stream date in 2022.
